1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-12,17,19-27 and 30 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Fitchmun (3,947,550).

3. Claims 1-13,15,17,18,19-27,30,31,32,33 and 34 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Dubots (5,460,759).

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1731

6. Claims 1-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dubots (5,460,759).

Dubots teaches the basic claimed process of manufacturing a silicon carbide article including ingredients, temperatures, compression molding, particle sizes.

Determination of the specific ingredient amounts would have been well within the realm of routine experimentation to one having ordinary skill in the art at the time of the invention.

These parameters would have obviously been selected to optimize the process conditions and/or the properties of the final product.
